

BLASTING ADVISORY BOARD

For years, owners have been seeing damage to our properties. We accepted it as normal issues with construction in our area. As it turns out, the damage being seen is seismic specific!

This same damage is being seen on properties that are 3, 13, and even 30 years of age!

BLASTING ADVISORY BOARD

Tossing a pebble in a lake creates a ripple effect. The energy from the stone carries in the water for great distances. This is the same occurrence happening in the water underground. The blast occurs directly in the Biscayne Aquifer and the water carries the energy wave to our properties!

The rock-mining industry in Florida's economy IS essential and we do not wish to see it stopped. It provides building materials we use such as concrete for our structures and support for our roadways. However, the destruction of our properties cannot be allowed to continue. The energy wave created to break the rock is also damaging our properties.

The Florida Chief Financial Office/State Fire Marshal oversees the regulation of blasting within the State. They have established the legal limit in Florida of the energy wave generated by blasting.

The State of Florida created the MiamiDade Pilot Program to acquire data of each blast. You can file a complaint for each blast you feel! Proper regulation must be created to co-exist with the industry.
